BETTER SAND BUILDS BETTER BUNKERS

Materials Sales Company continues to offer the highest quality products and customer service in the industry.

With our wide range of available materials, we are confident we can meet all your construction, renovations and maintenance needs.

With high quality assurance standards, our materials are tested periodically to ensure you are receiving the products you expect.

We guarantee you will have the best looking greens, tees, bunkers, athletic fields and landscape possible.

Ask about our unique Hedrick Quartzite Bunker Sands.

BV Hedrick Gravel & Sand is a family owned business that has been in the sand, gravel and crushed stone business for more than 85 years. All of our aggregate products are produced with pride at our own locations.

• Lessens fried-egg lies

• A crisper, cleaner feel

• Drains better and cleaner

Why Angular Sand?

Most golfers who play your course probably do not realize that the particle shape is the single most distinguishing physical characteristic of a great bunker sand, assuming that the color is acceptable.

The ideal bunker sand has Angular to Sub-Angular particle shape. To begin with, Angular to Sub-Angular particles produce a matrix that is more resistant to incoming balls, resulting in less tendency to develop fried-egg lies.

Angular to Sub-Angular sand particles also have more voids between particles resulting in a higher infiltration rate. Bunkers that drain better stay cleaner.

When you step into a bunker of Hedrick Bunker Sand you will immediately recognize the difference between the crisp, clean feel of Hedrick sand compared to the flat, dull and sometimes gummy feel of less than angular sand.

Hit a few balls out of a Hedrick bunker: The ball sits up and the club slices easily and consistently through the sand. Hedrick Bunker Sands excel in playability while requiring less maintenance.
